

# ACOUSTIC SURVEYS

Audio Optimisation

Acoustic Design

Acoustic Treatment

Achieve audio perfection with an audio survey, test your room and ensure the best quality acoustics.

Even the very best sound equipment is affected by the acoustic environment, if a room echoes and reverberates even the best equipment will not achieve its full audio potential. An acoustic survey provides the data to allow you to create the best possible acoustic environment whatever the room be it your kitchen, lounge, home cinema or a public building.

“A huge thank you to Clarke Infinity. The survey, recommendations and subsequent installation – works and sounds like a dream, a far cry for our echoing extension!” – A recent client

Clarke Infinity's Audio Survey package £550 + VAT per room which includes:

- High level room modelling and calculations
- Site survey
- An accurate reverberation time prediction (one reverberation time prediction)
- Multi plot graph of the acoustic performance
- Written treatment recommendations

A good value service with proven accuracy delivered by an experienced and reliable team.

Talk to our team on 01277 624444 today to book your Audio Survey and optimise your acoustics.
